

# Hemp Hurd

Natural Fibre  
TECHNOLOGIES

## Clean, Lightweight, and Strong.

---

Hemp hurd is a remarkably versatile material. It is soft to touch, lightweight, and exceptionally absorbent. This makes it a great candidate for loose fill applications such as animal bedding, oil & gas spill cleanup, and insulation.

Additionally as a bio-composite, hurd can be produced to make consumer and architectural products. Hemp hurd has a bright white/yellow tone and can be a beautiful finishing element in millwork. Lightweight panels can replace traditional drop ceiling tiles, or be placed to dampen acoustics in large rooms.

*Loose fill hemp hurd. Different grades and consistencies of hurd are available.*

---

**Contact Natural Fibre Technologies today to inquire about our hemp products or exploring possible hemp applications for your business.**

---

## Benefits

Hemp hurd is a superior alternative to traditional wood particulate products. Hemp is fast-growing and hemp plants can sequester large amounts of carbon.

- **Dust-free**
- **Light-weight**
- **Highly Absorbent**
- **Rot Resistant**
- **Fast-growing Renewable Resource**
- **Completely Biodegradable**
- **Active Carbon Sequestration**
- **Grown in the Canadian Prairies**

## Uses of Hemp Hurd

### AS LOOSE FILL

- **Animal Bedding**
- **Spill Cleanup Material**
- **Insulation**

### AS A BIO-COMPOSITE

- **Architectural Millwork**
- **Ceiling Panels**
- **Acoustic Baffles**
