

Hemp Mulch

Seed-free, moisture absorbent, and bio-degradable.

Hemp hurd is the woody interior core of the hemp plant. Its qualities make it a great alternative to hay or wood mulch.

Hemp mulch is processed off-field and is seed-free, meaning you won't have any unwanted hemp plants next growing season. Additionally hurd is highly absorbent and will help your beds retain moisture for longer periods of time. Lastly hurd is rapidly renewable, making it a better ecological choice compared to slow-growth wood chips.

NFT produces a course grade of hemp hurd for garden mulch, making great hardy ground cover.

Call Natural Fibre Technologies today to inquire about using our Hemp Mulch on your garden.

Benefits

Hemp is a fast-growing plant that can sequester large amounts of carbon. As a renewable material, hemp is the most environmentally friendly animal bedding product available.

- **Dust and Chemical Free**
- **Rot Resistant**
- **Highly Absorbent**
- **Light-weight**
- **Fast-growing Renewable Resource**
- **Completely Biodegradable**
- **Active Carbon Sequestration**
- **Grown in the Canadian Prairies**

CURRENTLY AVAILABLE IN 14KG/30LBS POLY BAGS (32" x 18" x 14")
